

Recap of learning

As we know, this term we are going to be designing and creating our own rockets!

So, last week we researched rockets; what they look like, and the different parts.

Today, we need to research materials that we might use to create our rocket. We are making mini-rockets, not real-life rockets - so we won't need massive sheets of metal, or real fire, or glass for the windows.

Have a look at your labelled drawing from last week. What materials could we use to recreate the spaceship?

Task

What is a material?

Research 'Children's Rocket Craft', have a look at some of the picture.

I'd like you to take a different coloured pencil and label your rocket from last week.

Label your rocket with which materials you will use for each part of your rocket.

On a new page, I would like you to write why you are going to use those materials.
